

## HOW TO MEASURE

- It's true that you only need to measure height and width. But to ensure accuracy, you can't take just two measurements – you need six.
- To get the width, measure from left to right, jamb to jamb. Do it at the top, middle, and bottom of the jambs to get three width measurements. **Record the smallest** of these numbers.
- For height, measure from the head down to the window sill on both sides and in the middle. **Record the smallest** of these numbers.
